Procedure: Weigh all of phase A into glass beaker and heat to 90°C. Mix with propeller and continue mixing until all raws are dissolved and solution is homogenous. Add phase B and slowly mix until uniform. Add phase C to A and B and slowly mix until uniform. Mix phase D into A, B and C until completely incorporated. Lastly add phase E into remaining phases and mix until completely uniform and pigment is suspended. Pour into desired lipstick molds, let come to room temperature, freeze and demold.
